# SOKO

## Waterfront Apartments

The Soko Westend Project was designed to incorporate spacious balconies that blend seamlessly into the living area. The balcony spaces offer uninterrupted views which take full advantage of the Brisbane River and city vistas, however if privacy is what you require the DSD sliding decorative screens allow just that.

Each sliding screen was manufactured in house using state of the art laser cutting technology, DSD also created the design that was unique and exclusive to this project which adds to the this buildings sophistication and style.

# CURWEN

## On the Park

This apartment complex was designed exclusively for owner-occupiers so naturally the developers wanted to include some lifestyle extras that would set this building apart from the rest.

DSD was assigned the task to create a screen pattern that would not only look great for years to come but also maintain its purpose of adding privacy to areas that required it. We like to believe we have done just that without compromising the style of the building.

All DSD screens and panels are manufactured inhouse using state of the art machinery and software.

# SAFFIRE

## Mooloolaba

Saffire is an apartment complex that has strong appeal with owner occupiers and in particular executive couples who want a place to come home to which is central, accessible, private and low maintenance.

Most apartments have breathtaking views of the ocean however there is still the ability to create privacy due to the DSD screens that were installed on each level. The screens can be moved which allows the home owner to adjust their surrounds as and when they please.

DSD offer a complete service from site measure, design creation, fabrication and installation...We can do it all.

# NATUZZI

## Fortitude Valley

The Natuzzi building was a very rewarding project for DSD as we were given the opportunity to work closely with Natuzzi and their architects to deliver a building facade that was true to the Natuzzi brand.

All the screens produced for this project were designed and manufactured on our state of the art machinery and equipment and made exactly to the architects specifications. The end result is a building that reflects the quality and style of the Natuzzi Brand.

# Mark Underwood Building & Construction

This award winning house was designed and constructed by Mark Underwood Building & Construction and is referred to as a “cutting edge design” if you get to see this house you will understand why.

The indoor/outdoor pool area has textured pivoting screens that can be fully opened to create a beautiful outdoor pool area. The screens can also be closed for privacy and weather, making the pool area perfectly usable almost all year round.

The staircase is also a true work of art, with its custom curved black decorative laser-cut screens takes pride of place when you step inside. All-in-all this project needs to be seen in order to truly understand the brilliance of this building.

# SAGE HOTELS

The Sage Hotel on James Street is Brisbane's newest boutique hotel. Built around the iconic Queens Arms, Sage Hotel seamlessly combines the traditional façade with modern hotel interiors.

This project required a custom solution as there was a need to create privacy from the adjoining building. DSD designed a solution that not only looks great but does the job perfectly, giving the parton the privacy they need but also allowing natural light to filter through the intricate pattern.

All the rooms in this hotel have been cleverly designed to complement their unique and innovative living spaces.

# OUR EQUIPMENT

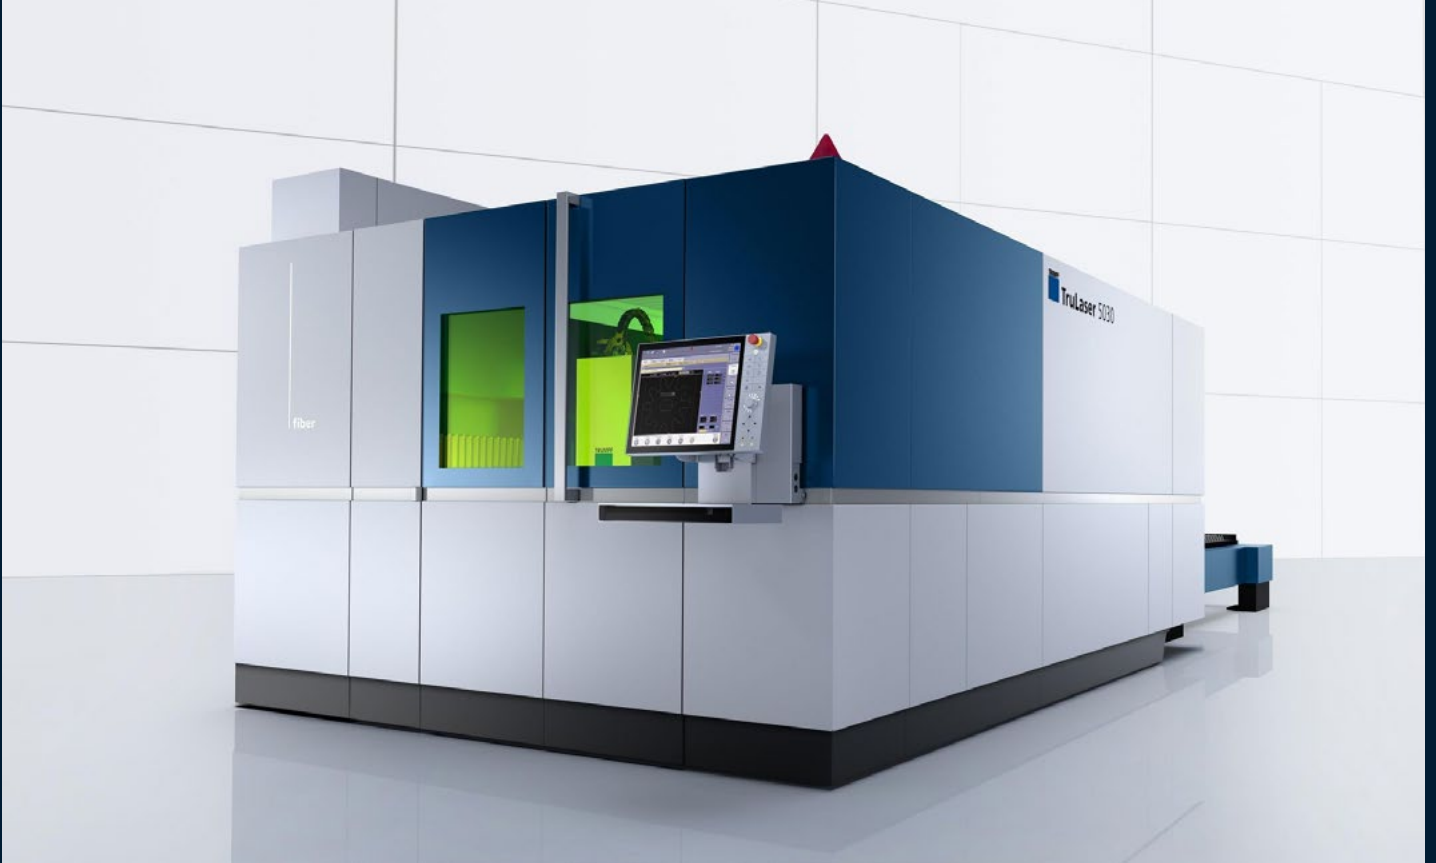

Laser Cut Decorative Screens are our speciality, we custom make high-quality laser-cut screens to your exact design and requirements using our state of the art CNC Laser Cutting, CNC punching and CNC folding equipment.

We can produce screens to all specifications and replicate any design you bring to us. We love seeing your laser cut screens come to life. The only limit is your imagination but we will strive to help you bring your project to fruition from concept to completion.

We have invested over \$1.5 million on the latest laser cutting equipment and we love to use it to its full potential. DSD screens are cut faster and are far superior in quality than other processes such as plasma or router cutting. DSD's Quality is in part due to the utilisation of our state of the art German Trumpf CNC cutting, punching and folding equipment.
